RESEARCH INTERESTS

On-Device AI, AI for Systems, AIoT, Mobile Computing, Edge Computing

EDUCATION

University of Pittsburgh, Pittsburgh, PA — On-going
Ph.D. Candidate, Electrical and Computer Engineering
Advisor: Prof. Wei Gao

University of Science and Technology of China (USTC), Hefei, Anhui, — July 2019
B.E., Electronic Information Engineering

RESEARCH EXPERIENCE

Research Assistant — 2019-present
Dept. of Electrical and Computer Engineering, University of Pittsburgh

- Currently developing green and sustainable training schemes for large language models.
- Developed a parameter-selective training scheme that can accelerate neural network training by up to 3.5x on weak embedded devices (e.g., Nvidia Jetson and Raspberry Pi).
- Developed and implemented an offloading scheme that allows extremely weak devices (e.g., MCUs with <1MB memory) to achieve real-time (<20ms) neural network inference. It is the first work that leverages Explainable AI to speed up neural network inference on weak devices.
- Developed and implemented a wireless backscatter system that leverages neural network inference to save its RF energy by up to 80%. The neural network is tailored based on the domain knowledge of backscatter communication, and hence is very lightweight and can be effectively trained even with a limited amount of data.
